5,000+
websites / month

About

Frontend developer with **5 years** of commercial experience in layout and JavaScript: landing pages, marketing sites, Shopify themes and site templates at scale. At Scale Final I owned the visual layer of a site generator — the section templates behind its growth from 500 to **5,000+ websites per month in 4 months**.

In personal projects I build React apps with TypeScript, Redux Toolkit and Next.js, including unit tests with Vitest. Looking for a frontend role at an international company, from HTML/CSS layout to React.

Experience

May 2025 – Aug 2026

Frontend Developer — Scale Final

- Owned the entire **visual layer** of an in-house site generator for performance marketing, in a 3-person team (generation logic, visual layer — me, test automation).
- Built the library of **section templates** (Bootstrap, Tailwind CSS) the generator assembles sites from; output grew from 500 to **5,000+ websites per month in 4 months**.
- Built a demo **Telegram Mini App** and a **Telegram bot** to simplify generation and control generator features.
- Shipped sites in Webflow, Pinegrow and custom HTML/CSS/JS; customized **Shopify** themes with Liquid.
- Delivered work via Git pull requests; sped up Figma-to-code with AI tools (Cursor, Claude).

Feb 2024 – May 2025

Frontend Developer — Traffic Kraken

Marketing landing pages in HTML5, SCSS and JavaScript: forms, calculators, CTA flows; mobile performance.

Apr 2023 – Feb 2024

Frontend Developer — WhoCPA

Campaign landing pages in HTML, CSS and JavaScript; fast page variants for marketing tests, layout and load-speed fixes.

Mar 2022 – Sep 2023
Part-time

Frontend Developer — Red-Flag

Responsive pages with Bootstrap, JavaScript and jQuery; Shopify storefronts and reusable HTML/CSS templates.

Jun 2021 – Oct 2021

Frontend Developer — Maizen RP

Responsive UI for a GTA V multiplayer server; React components on top of existing HTML/CSS layouts.

Projects

Pet project · 2026

Radio Browser

Internet radio on the public Radio Browser API: search with filters and “load more”, a player that keeps playing while you search, favorites and shareable station links. Race conditions handled with AbortController and **requestId** checks; 64 unit tests.

React 19 · TypeScript · Redux Toolkit 2 · Tailwind CSS 4 · Vite · Vitest
